You probably know this: The women's shaver holder that is held to the tiles with suction cups. Always at the stupidest moment the thing falls down. Therefore, without further ado constructed its own holder. I call this a "One Print Precise Fit Design" (OPPF): Measurement taken from the original parts, constructed, printed and inserted; no re-design or adaption needed.

My goal is always to include original 3D file so you are able to change designs according your needs.

### Print instructions

Printed with standard Prusa PLA filament (see picture). Nothing special.
