updated 30. 7. 2023 | published 30. 7. 2023

### Summary

The original had a hole the same way the zip-tie lay when closed. This one can't slip out. Ring for hanging extra.

NOTE! This was printed in PLA with 100% infill!

The way the opening was on the original, the tie could slip out, but I needed to thread the tie through net and hang the net up. So I made the opening to thread the tie through 90 degrees on. This won't slip. And the magpies won't be able to steal the bag of bread crusts anymore - I hope! I also narrowed the tie a bit to enable threading through the mesh net. Combined with this ratchet, the assembly hangs nicely on a wooden pin.
