Summary

This holder fits the Delta's T-shaped miter slot still and lets you dial in your blade and fence.

This is my holder for a dial indicator I picked up off Ali. It fits the T-shaped miter slot of the table saw very snugly. Run it up and down the slot several times to shave a minute off and it's perfect. I've included the FreeCAD design file if you need to tweak the slot for your dial or adjust the miter runner more.

It prints on my Ender 3V2 with 0.6 nozzle in about two hours.
