I have printed a lot of Vase's and needed flowers to put in them, So I created A way to mix and match flower shapes printed out and then placed on a stem in layers, So you can create a lot of different variation. It has taken a while to get it how I wanted and I think V1 is ready for other to try, I found it very addicting while creating it hopefully others feel the same.

NOTE: the flower parts are really thin and I use a Sunlu Flexible magnetic rubber Bed Surface, Using a glass or metal spring bed maybe hard to release without breaking the Flower layers, I found the magnetic rubber bed surface makes it easier to release delicate parts.

The petals are thin so you can shape them with your fingers and thumb to give them a nice bend so the flower dont look flat from the side view.

Please post your makes as I have very limited colors I own so it will be cool to see other colors used for the flowers.

Big Thanks!
