Summary

This is my dumpster poop bucket for the Bambu Lab printer, to work with AdrianGarside's minimalist Bambu Poop Chute.

This is my dumpster poop bucket for the Bambu Lab printer. It is designed to work with AdrianGarside's minimalist Bambu Poop Chute (<https://www.printables.com/en/model/372691-bambu-poop-chute>).

On this big Fellowes printer stand, there's about 70mm clearance on each side. This dictated a long narrow "poop bucket". I wanted to go with an industrial dumpster-looking thing, hence the panel design. I didn't want it to fall off from the printer's vibrations, so I added the clip to attach to the Armor mod plate. I was extremely pleased that this came out perfect (to me) the first time.

There is a manual support for the clip and the "auto" brim (5mm?). No other supports needed. When completed and cooled, the model came easily off the bed and the brim and support nearly fell off the model.
