This should be a very handy box to carry the **T7 Shield SSD**, With two slots for USBs. No more searching for cables.

Okay, I run few test print to figure out the clearance. The cables will not be squeeze and the SSD itself is very easy to slid in n out. Shell is over design to give it best protection.

This is very first plain version. I will make more fancy exterior one later. Maybe add some pattern or something, who knows.
