Summary

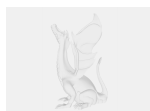

A jig to help add more truck mounting holes to your longboard

Made a jig to allow me to drill a new set of holes on my longboard to give an extended wheelbase. Bolt the jig to your existing truck mounting holes and then use your drill to drill a new set of holes that are 3/8" further out. I would set Z height of part to 18-25mm. Jig is designed to be bolted to the top of you deck with m5 allen head bolts.
