Summary

Allows you to attach wine glasses and flutes upside down, bar-style, without screws.

[Household](#) > [Kitchen](#)

Tags: [wine](#) [holder](#) [glass](#) [shelf](#)

I remixed the remix with the following modifications:

- The model is now 129x173mm
- It is now 16mm thick, to hold my choncky glasses
- I made an extension to make the rail longer
- I made a guide gig to help align the extension
- I made four slots to fit **3M Command strips** 70mmx19mm (the "L" size). I have tested this setup with my heavy glasses and they hold strong. Might have worked with fewer strips too, but better safe than sorry.

Printing instructions:

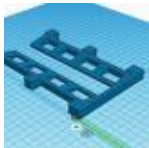

- Print flat, as uploaded. No need for supports
- 0.6 nozzle recommended

- 0.3mm layer height is probably good, I printed 0.26mm just for a better look
- PLA works great

Fitting instructions:

- Cut away the pull lip of the Command strips. They will sit embossed in the slot.
- I recommend attaching the Command strip to the holder with superglue.
- Wait for the glue to dry then attach the matching Command strip
- Apply to the designated surface. Hold in place for 30 seconds.
- I recommend waiting 2 hours before loading with glasses (although I only waited 30 mins and it's working fine)
- If you're adding the extension, use the provided alignment gig to properly distance the two sides

This remix is based on

Under shelf wine glass holder with end stop.
