Tags: [fpv](#) [fpvdrone](#)

A simple protective Caspula for large capacitors for Flywoo's Explorer LR4 FPV Drone. It also serves as a level stand for sensor calibration and an elevated foot on muddy ground before takeoff (only with battery mounted). The design is best printed, as most drone parts, with TPU or other flexible filament. (It may also fit with other versions of the Flywoo Explorer, but it is a simple solution made with only the LR4 in mind)
