updated 31. 7. 2023 | published 31. 7. 2023

Summary

Added Kobra (40mm) T-channel mount plate for the raspberry Pi 4B case

[3D Printers](#) > [Accessories](#)

Tags: [raspberrypicase](#) [pi](#) [anycubickobra](#) [raspberrypi](#)
[anycubic](#) [kobra](#) [octoprint](#)

This remix only includes the mount plate necessary for adapting [InternalError33's case](#) to the T-channel on the side of an Anycubic Kobra (for octoprint use).

I've printed it in PLA with a 0.6mm nozzle, 0.8mm line width, 0.2mm layer height. It was printed "vertically" (longest direction on the Z axis).

I'm guessing that most other common combinations should work fine (e.g. PETG for use in a heated enclosure).

Source CAD can be found [on Onshape here](#).

This remix is based on

Raspberry Pi 4B Case
