This tool can remove the valve core from Schrader-style valve stems. These are commonly found on mountain bikes, car tires, HVAC, and [water rocket launchers](#).

As this is a plastic tool, it cannot match the strength of a machined metal tool. Depending on the tightness of your valve, it may not work, or may break down after one or two uses.

### Print settings

- Tune for maximum strength
- Print flat
- PETG/ABS/PC preferred but PLA may work in a pinch
- 2 walls
- Infill 20%
