Case for TonUINO AiO PCB  
by Leiterkartenpiraten GmbH and the TonUINO Project by Thorsten Voss.  
More information about this awesome project here

<https://www.voss.earth/tonuino/>

<https://www.leiterkartenpiraten.de/produkt/tonuino-all-in-one/>

FAQ and detailed description about this project and also about my box you can find here.

<https://discourse.voss.earth/>

### Print instructions

The stl file for the aperture of the Aio PCB can be downloaded here for free ( <https://www.leiterkartenpiraten.de/produkt/all-in-one-blende-kostenlos-zum-selber-drucken/> ). Therefore only one photo here.

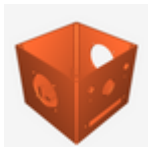

The stl file of the lid available here is without name. It can be customized by you in the corresponding FreeCad file.

For some parts FreeCad files are also available . Here you can make individual adjustments. Since I am not the FreeCad profi, may I be forgiven for errors or awkward designs.

The speaker grill is a remix of a grill for the Visaton FR10 by Niggo. The original can be found here. <https://www.thingiverse.com/thing:3983486/files>

All printed with Prusament PETG on my Prusa Mini+ .  
Except for the LED cover, which was printed with transparent PLA prusament
