### Summary

I used these to block the glare from the rear license plate lights. It shoots up a bright glare especially at night making it impossible to see.

I used these to block the glare from the rear license plate lights. It shoots up a bright glare especially at night making it impossible to see. Use 3M waterproof tape, tape it to the back then add these to your rear bumper on the top half of the light. This will make the glare completely go away and you'll be able to see again!
