updated 7. 8. 2023 | published 7. 8. 2023

### Summary

A simple bicycle with a slight bevel on top. Also with a separate stand to allow the bike to stand up.

A simple bicycle with a slight bevel on top. Also with a separate stand to allow the bike to stand up.

This is the first 3D model I have made from scratch, I was inspired by <https://www.printables.com/model/386803-cervelo-soloist-carbon-wall-art> who has made a bike. This is a complete remake with a little base to slot the bike into.

I made this as my partner wanted to send it as a gift to her friend.

The example pictures were made as a quick print so are a little rough.

**This model is very small, please consider making it larger using your slicers Scale tools. I suggest 200% or higher for the best results. (Apologies I haven't made it bigger yet im still playing around with TINKERCAD haha)**

Please most your Makes :)

Any suggestions I am very open to them and always looking to improve and learn :)
