Summary

Attempt at making a cheaper Bug-A-Salt

[Household](#) > [Other House Equipment](#)

Tags: [nerf](#) [salt](#) [bug](#)

This is a prototype of an attachment for a cheap single-shot Nerf gun, that can be filled with salt in order to shoot insects.

The current version requires electrical tape around the barrel to make a good seal, and Blu tack or similar to seal the salt port.

The STL is upside down- print it with the front touching the bed and you shouldn't require supports.

Very much still a work in progress and hasn't been properly tested, if you make this PLEASE let me know if you shoot anything with it and at what range.
