Summary

Wall mounts for my Snap-on and Ryobi batteries

[Art & Design](#) > [Wall-mounted](#)

I've designed and 3D printed a set of wall mounts for my Snap-on and Ryobi batteries. These mounts can be printed in PLA and are designed to hold the batteries securely in place. They're also very easy to install, simply screw them into the wall and you're good to go.

These mounts are a great way to keep your batteries organized and out of the way. They're also very convenient, you can easily grab a battery when you need it without having to dig through a toolbox.

If you're looking for a way to store your Snap-on or Ryobi batteries, these 3D printed wall mounts are a great option. They're affordable, easy to print, and they look great.
