Summary

Holder for my 000 and 0000 steel wool

[3D Printers](#) > [Accessories](#)

Tags: [organizer](#) [holders](#) [steelwool](#) [household](#)

I created this holder for my 000 and 0000 steel wool that I use to clean my build plates.

Nothing special is needed for the print, such as supports.

Settings:

.4 nozzle, .2 layer height 15% infill 3 wall loop.

The 000 and 0000 can be printed in a different color if you would like. They are offset into the side by 1mm and extruded out 1.1mm for a slight edge.

I added a model with no printed labels incase you wanted to repurpose or use for a different grade of wool.

I printed the one in the picture with Bambu Labs PLA basic brown and Green.
