Summary

I made a mount for the fire suppression tube so it can easily be removed, and is secured by a latch.

[3D Printers](#) > [Other Printer Parts & Upgrades](#)

Tags: [upgrade](#) [mount](#) [fire](#) [enclosure](#) [hinge](#) [latch](#) [suppression](#)

The mount is screwed into place with m3 screws and a nut. The tube can be easily removed if needed by opening the hinge which is secured by a latch.

Print the 3 parts for each side and just assemble by pushing in the peg into the holes.

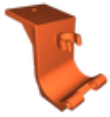

For the BlazeCut Fire Suppression System available for purchase on prusas website

Print in PETG or ABS/ASA
