Updated to version 2.2

Mostly cosmetic changes, but also made the supports much easier to remove.

This is a universal phone stand that is adjustable in height and angle.

My daughter wanted a phone stand that could stand straight up at 90°. In order to do this, you need a clip at the top to keep it from falling forward.

I used a short piece of elastic band to hold it together. You can dye it or use a marker to make it the same color as the plastic.

It also has a pass-through for the charging cable.

I added a speaker / mic pass-through in v2.

I made a short video on assembling the parts here >> <https://youtu.be/kzJ6qjEnIGE>

The base and stand have built in supports that need to be removed.
