I was getting some clogs and kept having to take apart the extruder.

The small needles were not helping and when I googled a tool for it there was a Declogger tool called NoClogger.

It was €10 but then €16 for shipping!!!

Pfft. Not gonna happen.

Bought 5x300mm steel rods with a diameter of 1.5mm on amazon for about €6 and used the original as a template for a handle.

Cut down the length and rounded the end and it works!!!

Now I can make a few more and give them away to any locals if they need it.

This remix is based on

Knurled Handle
