### Summary

Mjx hyper go parts

[Hobby & Makers](#) > [RC & Robotics](#)

Made a shock tower for mjx hyper go after breaking my gfs and not being able to find a decent printable replacement should just bolt right on with no modification tho you might need to drill out the holes for the long pins for the upper suspension arms with a 2.5mm drill bit as I had to with mine even tho I modded the holes right if this is a problem with any one els pls let me know and il modify the part to have bigger holes I printed in pla at 100% infill with supports I will be makeing more but out of petg at when this one breaks sofar it's been really good showing no signs of breakage after a few hard hits
