### Summary

A niche design for cable bulkheads or glands, for those cables with large molded connectors.

---

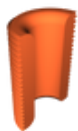

[Hobby & Makers](#) > [Electronics](#)

---

A niche design for cable bulkheads or glands, for those cables with large molded connectors. It's base size works on HDMI cables, and can be scaled for a range of sizes (I've tried 60 up to 110%) The flat part of the cores may need to be sanded to get a smooth assembly.

One Assembly = 2x GlandNut, 1x LeftCore, and 1x RightCore
