It looks like @3DDIY and I came up with the same idea indepenently, but wanted to acknowledge they're work as well: <https://www.printables.com/model/389412-shaper-origin-plate-mount>

Either of these models will do the same thing - mine just has more fillets. :)

Print 2-4 of these to mount your Shaper Plate to a wall. I'm using mine with the Festool MW-1000 to mount the Plate on the back of the extension wing when it's folded and stored. I wouldn't store it here when you're using the extension wing as it blocks some of the MFT holes and I wouldn't want to accidentally drill through it or something.

Uses a #6 screw.

Included the Fusion360 file in case you want to remix.
