Tags: [cigar](#) [humidifier](#) [boveda](#) [coolidor](#) [humidor](#)
[tupperdor](#)

Just a simple 60g Boveda holder for a humidor lid, side, tray bottom, or wherever. Features a window to display the percentage of the pack inserted within and finger notches to more easily swap it out. Holes at corners for screws if desired.

Added a quick edit for a long-side-opening version (L) for any who need it, and a curved version (C).

75% in the pic because this humidor is leaky AF and will be replaced with a tupperdor @69%.

Print instructions

Suggest slicing for 0.25mm or higher for speed, doesn't have to be pretty.

Brim on, cooling on.
