### Summary

Gridfinity base plate to fit on top of the P1S with AMS.

---

[3D Printers](#) > [3D Printers - Upgrades](#)

---

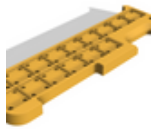

This is a remix of thrutheframe's X1 gridfinity baseplate. I removed to screen and button cutouts and added some more gidfinity squares in the new space. I also moved to 15x20mm button to the front and added some bambulab branding.

Note that the fit around the AMS is very tight, but after making sure the joint between the two halves was good it fit well for me (I used ca glue and 2 screws).

I thought it might slide around without the screen to hold it in place, but the **faceplate** I have seems to work well to hold it in place together with the AMS.

Update 01/09/2023: added a version without the cutouts for the LED and light switch
