Summary

A window mounted holder for Stratux dipole antennas and USB GPS/GNSS receiver

Tags: [antenna](#) [stratux](#)

When mounting a Stratux receiver into the back of a plane, the antennas need to be placed at the window. To fix everything in place, I designed this holder which carries antennas for ADS-B and FLARM (see my [Stratux DIY Dipole Antenna](#)) and a UBLOX M8030 Dual GNSS USB receiver as available through the standard sources.
