Summary

A plug to keep rain or dirt away from the keyhole of this lock

Generally I welcome any form of protection for the keyhole on a bicycle lock, to keep any kind of grime out. As the Hiplok Original 1.5 lacks this, I made this little thing to do that. Luckily the keyring provided with the packaging comes in handy, to attach the plug right to its place near the keyhole.

I printed the plug in TPU, but I guess PLA and PETG might also work.
