Parameters:

The adapter is intended to be used with items that have a relatively flat backside where the adapter can be glued on. However the file can be adjusted to match the glueing area with thus of the item that needs to be mounted.

On top of that the backside should be stable enough to accommodatethe weight of the item itself.

Installation:

The installation process is very straight forward. Apply a glue to the backside of the print. The glue should be chosen depending on what weight the mounted item will have. In my experience hot glue or construction adhesive works fine for most use cases. Afterwards place the print onto the item and let it dry. Afterwards everything can be mounted just like with a normal Vesa compatible Item.
