I thought it would be a fun project to make, so I created a flashlight holder, but for the internal part of it, so that it can dry easily after cleaning.

There are two parts that can be printed separately or together: clamp and ring. They have a tight snug connection, so that ring slides onto the clamp. This way no glue is required to make one solid piece.

Make sure to use support material for the clamp, and to clean it up after the printing process in order to have the connection smooth.

Enjoy!

Model files

clamp.stl

☐ Clamp part that slides onto a shelf

flashlight_holder.3mf

☐ Ready 3mf file if someone would like to make changes to gcode

ring.stl

☐ Ring that slides onto the clamp
