updated 2. 8. 2023 | published 2. 8. 2023

Summary

A remix of TechwithKramer's reusable filter with Ktek's slicer setting

[3D Printers](#) > [3D Printers - Upgrades](#)

Tags: [filter](#) [bambulabx1carbon](#) [activatedcarbon](#) [bambulabx1](#)
[bambulab](#) [activatedcarbonfilter](#) [replacement](#) [replacementpart](#)

A remix of [@Tech with Kramer's activated carbon filter](#) with the addition of pull handles you can use with your finger nails. Use [@Ktek's slicer settings](#) which is copied and pasted bellow for your convenience.

Recommend to print in PETG or ABS/ASA for heat resistance.

CHANGE SLICER SETTINGS TO THE FOLLOWING BEFORE YOU PRINT !

Quality 0.20mm Standard @BBL X1C (0.24mm should be fine too)

Settings

Quality:

- Only one wall on top surfaces = OFF

Strength:

- Wall loops = 5 or 6 (depends on infill pattern)
- Top shell layers = 0
- Bottom shell layers = 0
- Sparse infill density = 25% or higher
- Sparse infill pattern = Aligned Rectilinear OR Triangles OR Honeycomb (AKA Bestagons) OR Grid.
- Infill/wall overlap = 20%
- Infill direction = 0 or 90 degrees

Any infill that doesn't cover the holes basically all work, feel free to play around with the density with different patterns depending on your carbon pellet sizes.
