Summary

Scare away your electrical daemons with absurd antennas all over your garden.

People believe in crazy things - like putting copper wire sculptures in their garden in the hope that they act like antennas funneling energy into the roots or some other nonsense...

I mean everyone knows that the real purpose of these things is to scare away the daemons. Works best if you furiously polish the copper just before sundown on Halloween so that children's flashlights reflect all the scary coils before the copper dulls with oxidation.

Author's note: The inherent elegance of helixes is undeniable. Inscribing two (clockwise and counterclockwise) on a cone made for a fun 20-minute

CAD refresher. Don't laugh at the AI-generated images too hard - this whole thing is just a joke.
