Tags: [lamp](#) [rupee](#) [zelda](#) [led](#) [ledlight](#)

I have another model of just the **rupee** now decided to modify it and add a base

Materials:

- Screw M3x8, it can be any long just needs to be an M3
- Clock Battery CR2032 3V
- Battery holder for the clock battery

- Switch ON Off (outer size 1.5 cm x 1cm) I used this **one**, hole made in the base is slightly tinier so it can be tight, just slide it without problem

- LED any color, I used an RGB 2 pins that blinks by itself
- 330 ohms resistor (can vary depending on the LED you used)

- some cable, solder and soldering iron

Print settings

- Rupee.stl

0% infill and walls 3

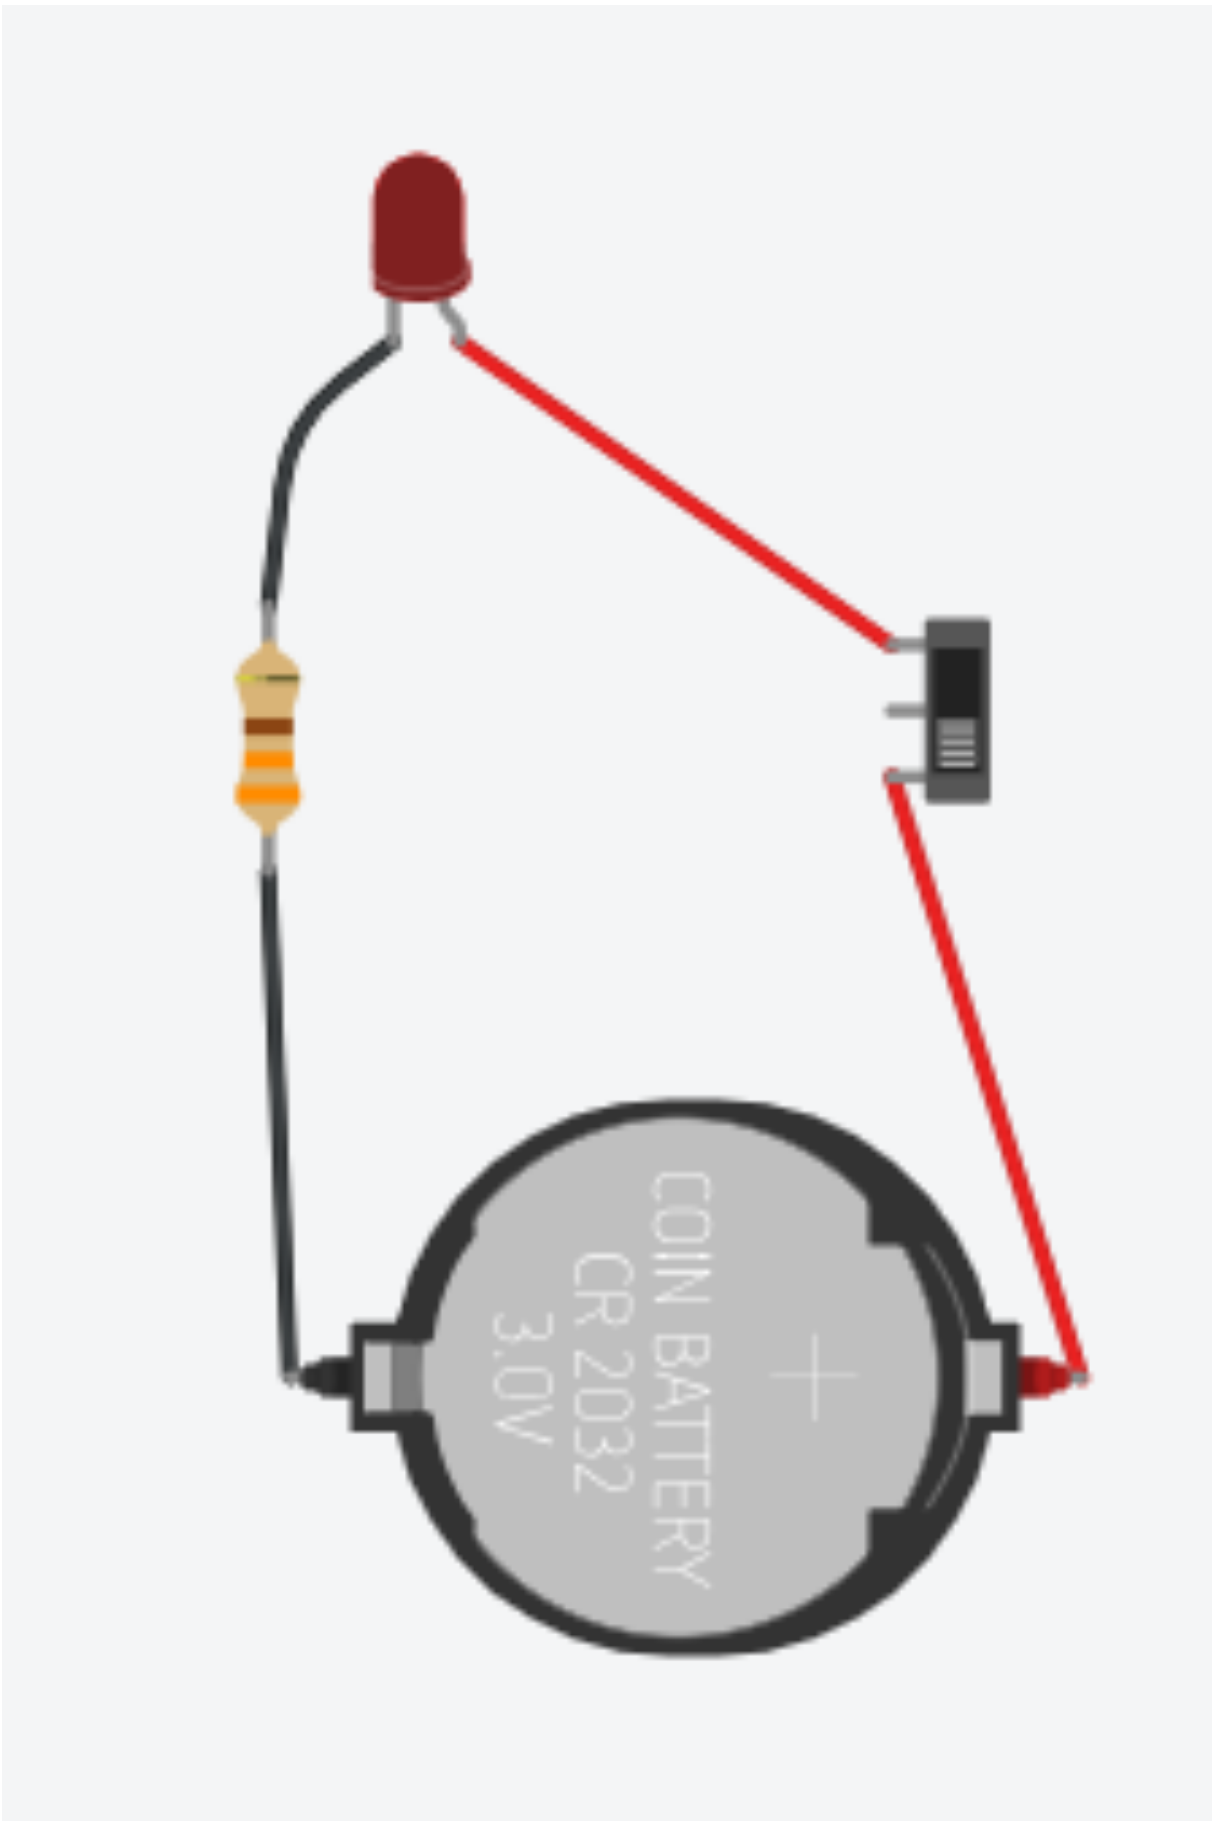

recommend to print using a clear color of filament

- Other files print settings can be anything

20%infill 0.2 resolution

Circuit

Note: ignore the middle third pin of the switch, the one used has only 2 pins
