This is a set of oar locks that I made for use on my Fish Cat 4 float tube. There is a left and a right oar lock that are designed to be held on to the float tube by a nylon strap that the user provides. There is also a feature that accepts a length of 3/4 PVC pipe that when attached by straps to the two D rings on the float tube helps stabilize the oar lock. I also included an additional mount for the 3/4 PVC pipe that can be attached to the free end of the PVC pipe and strapped to the float tube for additional support.

The hole in the oar lock is 1/2 inch in diameter and is designed to accept most common oar locks.
