A successor to the panzer faust line of rocket delivery system, the Sleeve opted to develop a heavier less-disposable variant to leverage their limited resource. The larger warhead allows it to carry more propellant and explosive charges increasing its effective range and lethality respectively, while sophisticated fire control system and mech-compliant pistol grip should allow pilots to deliver rocket the size of a mobile suit limb with greater precision than ever before.

This is a multi-part weapon figure for 1/144 scale gunpla that can also be used by 1/12 scale figure. Parts are designed to be held with friction, but CA glue can be used if you need a better bond.
