Summary

Remix of the original to fit the new(er) V3 camera's base.

There are two models, one where you'll tap an M3 bolt into the plastic, and one where you will embed an m3 hex nut into the print.

When printing the embedded nut version, be sure to add a pause at the layer immediately before the hex nut is covered so you can press the nut in by hand.

No supports necessary if printed with the screw hole touching the build plate (see orientation of original model).
