Summary

Used to load Sig Saur P365 style magazines with Subtle3D's SLV6 Speed Loader.

[speedloader](#)

It's not perfect but it works. Glock mags kind of work but are smoother with Subtle3D's original Glock inserts. Vice versa with sig mags and my insert. When printing, rotate ~15degrees or until the side closer to the flanges is on the bottom (sorry I don't know how to pre-orient a .STL).

Modeled from scratch based on the original Glock insert but it's slightly different since I didn't know all the exact dimensions and wasn't able to measure perfectly on my CAD software.

This remix is based on

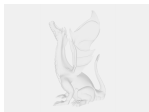

SLV6 Magazine Speedloader

by Subtle3D
