Summary

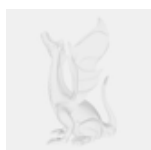

This mount allows a Voron Stealthburner toolhead to be mounted on a modified X carriage of a Rook 180 3D printer.

I wanted to install a Voron Stealthburner toolhead in a Rook 180 that I built recently, so I came up with this. This includes modifying the X carriage of the Rook 180 and the toolhead mount of the Stealthburner to allow the toolhead mount to be installed on the X carriage.
