After printing off a bunch of [Modular Triptic Nespresso Holder](#), I've had occasion to buy some off-brand nespresso capsules. These don't come in a nice box that can be inserted into the modular holders.

So, this is an insert that goes into the top of these, to make them longer and drop some other coffee pods into them.

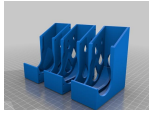

As a bonus, I re-made the original design from scratch in F360 and added that file, too.

Print instructions

15% infill, rotate 90 on X in PrusaSlicer to print upright.

Make sure your end gcode moves the print head to Z210 otherwise it will likely knock the print over at the end.
