This mount is a replacement for the incredible heavy und bad designed handlebar delivered with the original Ninebot Mini Pro Street in Germany and Austria. It is designed to hold a piece of rustless waterpipe with 15mm outer and 13mm inner diameter as handlebar. The endplugs have a gap to clamp the end of wrapping tape. The holes are for cutting a M6 thread to take M6 bolts.

Print Settings

Rafts:

Doesn't Matter

Supports:

No

Resolution:

0.2mm

Infill:

25%

Notes:

I printed the part with PLA. I sliced and printed with supports, but after my first and only print i changed the design. The bellholder extension is flat with the body now - therefore it may work without supports...

I have used Cura 3 and chose Zigzag-infillstructure.
