Summary

A sleek but elegant furniture leg!

I needed a few legs for a bathroom cabinet, so I just made something myself!

If it isn't so well visible in the pictures, the leg is slightly angled.

This leg has a **height of 160mm**, you can of course scale it a bit in Z but note that you also scale the plate to a small extent.

Make sure you use enough perimeter and infill. This is not a foot designed for very heavy loads. The leg is then screwed on with 3 screws. The holes have a diameter of 4.5mm.

I also added a drilling jig to align the leg with the outside edge of your furniture.

Please leave a [like](#) if you enjoy my design. Also feel free to [check out my other uploads](#). :)

Make sure to follow me on [Twitter](#)! ;-)
