This controller grip is for the Miyoo Mini Plus and should be used with self-adhesive felt.

Btw: the grooves/slits are there so the seams are not on the surface of the print.

Please use the .stl provided.

I have added the open .3mf files but due to an accident v4 already is the final, substracted form, so please bear in mind that v3 with separate elements is a little older.

This took several hours and about 5 prototypes to make yet it isn't perfect ... hope you'll like it anyways.

\*self-adhesive velvet flocking sheets: <https://amzn.to/3YimvTv>

\*The used link(s) is/are so-called affiliate link(s). When you buy a product using this link, I will receive a small provision. The price itself does not change. Thanks so much for your support :)

## Print Settings

### Printer Brand:

Anycubic

### Printer:

i3 Mega S/Pro

### Rafts:

No

### Supports:

Yes

### Resolution:

0.2

### Infill:

15

**Filament:** Extruder PLA NX2

### Notes:

I've used tree support in Cura which works quite well for my printer and the used filament.

Category: Video Games
