I made this Cosplay Prop for a friend of mine to accompany their Jinx Cosplay. It prints really well without the need of a huge amount of supports. The only place where I'd recommend some is on the grip pieces. Once the gun is assembled it's fairly robust, so don't hesitate to take it to a convention of some sorts, it can handle being carried around the whole day without any issues.

In case you are wondering: I did not add a trigger because first of all it would probably break off since it's a small part and second because in my experience it is way less comfortable to carry around items like this all day when the trigger is always in the way of your index finger.

### IMPORTANT:

Printing the “Barrel” file is optional, I would recommend buying two pieces of acrylic tube with outer $\varnothing$  = 50mm and inner $\varnothing$  = 46mm and a length of 82mm each.

Since there are plenty of online stores selling them for reasonable prices they are not too hard to come by.

If you don't want to buy them, feel free to print them in clear resin, but I have never tried myself, so I cant promise a good result.

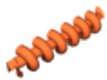

The Assembly Pin has to be printed 5 times

I hope you have fun printing, painting and cosplaying with this model, if you have any questions feel free to ask and if you make one, please post a make so i can take a look at your awesome work
