This is a form for creating castle gates, arches and tunnels with sand.

this simply gives you something to pack sand against and creates a clean opening in the sand.

One version has a flange that simulates a stone arch pattern. If you want the stone pattern on both sides there is a second form that you can insert in the first one to get the pattern on both sides.

The other version does not have the flange.

Pulling the form out is a delicate operation but, take your time, wiggle the form gently as you pull back and you should get decent results. I also suggest pushing down on the form from the inside as you pull it out.

## Printing

Print with handle side down.

No supports, nothing special.

Enjoy!
