Summary

This model uses a food dryer to make filament dryers

[3D Printers](#) > [Accessories](#)

Tags: [filamentdryer](#)

This model uses a food dryer to make filament dryers. I bought a simple food dryer on the market and made a filament dryer box with it.

You can print up to four 'Dry box for Spool' files to dry up to four 'Filaments' at the same time.

PLA recommends drying for 12 hours at approximately 50 degrees.

.3mf file is pre arranged for bambulab 3D printers
