This unit allows you to connect and mount your guitar pedals (with Hammond 1590 cases) within your eurorack system. The pedal case uses it's existing screws to mount to the hanger. It's tricky mounting the top screws to the eurorack rails, but once it's in there you're in pretty good shape. I put a zip around the top portion of my pedal so that it wont flex or pull on the mounting screws during travel. Enjoy!

I hope this helps!
