I love my Michigan Synth Works F8R, and I wanted a way to label the CV routings on the unit so I don't have to remember them.

I exported the gcode with supports, mostly because I wasn't sure if it would print well without them in the small overhangs. I never tested it without the supports, but I can say that getting the supports OUT of such a small area is less than fun and potentially dangerous with an exact-o-knife. Please be careful when getting the supports out, or try printing it without the supports. I've included the template to create the printable label too. Enjoy!

I hope this helps.
