Pusa LCD and 3.5 Touchscreen Housing for Enclosures

Because all the LCD housings, I found are open at back, I designed a closeable one with clickable backplate. Screw backplate to enclosure then click it on.

The Touchscreen mount is for Nextion 3.5 screens (NX4832T035). Use some m3 hardware.

I added my f3d file for fusion 360 too.

If you like it, like it.

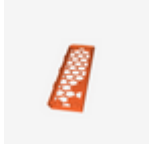

And please, if you have time to search, download and print, then you have also 5-10 minutes to post a make.

Happy printing from Germany.

Print instructions

for bottom part deactivate skirt.
