I originally created this to be able to mount guitar pedals outside of my eurorack case (housed in a pelican air), but quickly learned that they are so helpful for cables and any other thing you might need to get easy access to. I've done a fair bit of touring as a stage tech, and just to be able to hang headphones or instrument cables off the side of your pelican is so helpful.

I'm sort of proud of this design, I woke up with the design stuck in my head one morning. I just created it and printed it in a few hours. I think it was the first time I felt confident about creating something in 3D.

The piece fits both traditional pelicans and pelican Air models. I have a ton of them with me in all my pelican cases.

Enjoy!

I hope this helps.
