updated 4. 11. 2023 | published 4. 11. 2023

Summary

This will help you Align the PEI sheet on your Neptune 3 Pro so when you reattach it the Sheet will be better lined up..

Just a Super cool upgrade I found on here and adapted it for my needs... It works but not as tight as the bolt in version as I had troubles with the screws not staying tight now it could have just been a me problem but if this can save another newb like me from the same problem then its a win...

It is Much better with this 11th try as I found the right front corner to make contact with the printer when calibrating lol but still may need some tweeking but so far It didn't hold up in PLA so I have printed in in PETG and ABS/ASA and that seems to hold up better..

I am very new so Not sure what the best filament to use so I have tried it in a few...
