Summary

Cover UI plate (blind, Visaton K50 speaker, GPS-SMA) for YardForce SA600H (and similar models)

[Household](#) > [Outdoor & Garden](#)

Tags: [sound](#) [speaker](#) [mower](#) [coverplate](#) [openmower](#)
[yardforce](#)

A Cover UI Plate, Speaker holder, GPS-SMA Plug, for my <https://openmower.de/> build.

Fit for YardForce SA600H (and similar models).

Update 08/17/2023:

If your main interest is the mount of your speaker, better check this [alternative sound box creation](#), as it's much better protected against top-water.

Update 08/03/2023:

Attention: It turns out, that even with the additional YardForce Top-Cover, this design has **not** enough top-water protection! You need to add some kind of plastic-cap to protect your OpenMower electronics.

My major Print values:

- PLA, 0.4mm Nozzle, 0.2mm layer height
- Print up-side-down
- Print-bed- support required (but with no other supports!)
- 15% Gyroid
- See pictures for more info
